

Appendix A: Salary component dataset

This appendix presents the salary and employment records used to estimate human labour costs for parcel sorting. The data cover recruitment listings for SF Express and JD Logistics and include wage ranges, employment status, shift arrangements, employee benefits, performance payments and job content. The tables report summaries at the carrier, city and role levels. The calculation rules used to convert the reported wages into monthly and annual labour costs are stated before the data tables.

Table A1: Field definitions and assumptions

Field	Explanation
Monthly salary range	Monthly salaries and hourly or daily wages are converted into comparable monthly values. The conversion assumptions for working hours and working days are reported below.
Estimated annual cash wage	Calculated as the monthly equivalent midpoint multiplied by 12, or by 13 when a 13th-month payment is explicitly stated.
Estimated annual employer labour cost	Calculated as annual cash wages multiplied by 1.30. The additional 30% represents an assumed allowance for employer-paid social insurance, housing-fund contributions and other employment-related costs. This assumption is examined through sensitivity analysis.
Employment and compensation attributes	Night-shift work, direct-hire status, social insurance, housing-fund contributions, accommodation, meal allowances, overtime, piece-rate or performance pay, bonuses and 13th-month payments are recorded in separate fields.
Data limitations	The observations were extracted from publicly available recruitment listings, which may be revised or removed over time. The values should therefore be interpreted as indicative market observations rather than audited company payroll data.
Source	Data were compiled from publicly available recruitment listings. The corresponding source details are provided in the accompanying data repository.

Table A2: Carrier level salary summary

Carrier	Samples	Avg monthly low (RMB)	Avg monthly high (RMB)	Avg monthly midpoint (RMB)	Avg employer labour cost (RMB)
JD Logistics	68	5,946	7,622	6,784	105,971
SF Express	30	5,503	7,357	6,430	100,311
Total	98	5,813	7,543	6,678	104,279

Table A3: Prevalence of reported employment and compensation components by carrier

Carrier	Night shift	Direct hire	Social insurance	Housing fund	Accommodation	Meal allowance	Overtime	Piece/performance	Bonus/13th
JD Logistics	38.2%	52.9%	35.3%	30.9%	14.7%	11.8%	4.4%	7.4%	16.2%
SF Express	50.0%	83.3%	10.0%	0.0%	16.7%	13.3%	6.7%	6.7%	10.0%
Total	41.8%	62.2%	27.6%	21.4%	15.3%	12.2%	5.1%	7.1%	14.3%

Table A4: City level salary summary

Carrier	City	N	Avg low (RMB)	Avg high (RMB)	Avg midpoint (RMB)	Avg employer cost (RMB)	Representative jobs
JD Logistics	Shanghai	5	6,800	7,800	7,300	113,880	Parcel Sorter; Parcel sorter (part time); Sorting and Stock Handling Worker
JD Logistics	Zhongshan	1	6,000	7,000	6,500	101,400	Parcel Sorter
JD Logistics	Urumqi	1	5,000	7,000	6,000	93,600	Parcel Sorter
JD Logistics	Beijing	3	5,667	6,667	6,167	96,200	Store/Front warehouse Picking and Packing Worker; Direct hire Temporary/short term Parcel Sorter; Direct hire Store/Front warehouse Picking and Packing Worker
JD Logistics	Nanjing	1	7,000	8,000	7,500	117,000	High-pay Warehouse Operator
JD Logistics	Nanning	2	5,100	6,750	5,925	92,430	Warehouse Worker; Picking and Packing Warehouse Worker
JD Logistics	Nanchang	2	5,500	7,000	6,250	97,500	Temporary/short-term Sorting and Stock Handling Worker; Direct hire Warehouse Operator
JD Logistics	Nantong	1	7,000	8,000	7,500	117,000	Parcel Sorter
JD Logistics	Hefei	3	5,733	7,500	6,617	103,220	Parcel Sorter; Direct hire Warehouse Worker; Direct hire Parcel sorter (part time)
JD Logistics	Dalian	1	6,000	8,000	7,000	109,200	Parcel Sorter

Appendix B: Worker efficiency and sorting quality parameters

This appendix documents the worker efficiency and sorting quality parameters used in the dynamic humanoid robot break-even simulation. Publicly reported benchmark values are presented where available. When no public worker level value is available, the public value field is reported as N/A and the model value is treated as a scenario assumption.

Table B1: Summary of base worker efficiency inputs

pph = parcels per hour. Effective parcels per shift include effective working time and quality adjustment used in the simulation workbook.

Carrier	Base pph	Shift hours	Effective time	Peak loss	Effective parcels/shift	Basis
SF Express	500	10.5	80%	15%	3,213	Base model uses public 500 parcels/hour benchmark and recruitment based shift evidence.
JD Logistics	400	10.0	80%	15%	2,448	Base model uses lower worker throughput due to lack of public JD worker level sorting evidence.

Table B2: Indicator level evidence classification

N/A means that no public worker level value was available in the collected sources.

ID	Category	Variable	Carrier/context	Scope	Public evidence	Data status
SF_MANUAL_PPH	Productivity	Parcels processed per hour	SF Express / manual sorting	Worker level comparison benchmark	Public comparison benchmark: manual sorting about 500 parcels/hour.	Public benchmark - media/non-official KPI
SF_AUTO_HUB_PPH	Productivity	Automated system throughput	SF South China operating hub	System/equipment level	Public system benchmark: automated sorting equipment processes at least 71,000 parcels/hour.	Public system level data
SF_AUTOMATION_INVEST	Peak/automation investment	Transfer hub automation investment	SF Express 2025H1	Company level operating data	Public company material: transfer efficiency +12.5%; >120 transfer automation units; >380 AGV forklifts; automation capacity >5.57 million parcels/day.	Public company material

ID	Category	Variable	Carrier/context	Scope	Public evidence	Data status
IND_HZ_DAILY	Productivity/quality	Large logistics park daily capacity	Hangzhou Chengnan smart logistics park (industry benchmark)	Site/park level	Public industry benchmark: logistics park processes 2.2 million parcels/day with 99.99% sorting accuracy.	Public system level benchmark - company not named
IND_HZ_ACC	Quality	Automated sorting accuracy	Hangzhou Chengnan smart logistics park (industry benchmark)	Site/park level	Public industry benchmark: automated sorting accuracy 99.99%.	Public system level benchmark - company not named
SF_SHIFT	Shift	Shift length	SF Express / recruitment based sorting sample	Recruitment/job-posting level	Recruitment evidence: 5h, 10h, 10.5h, 11h, 12h and 12.5h shifts appear in postings.	Public recruitment information - verification required
SF_EFFECTIVE_TIME	Productivity	Effective working time ratio	SF Express / manual sorting	Model assumption	N/A (no public worker level effective working time ratio).	Model assumption
SF_WRONG_SORT	Quality	Manual wrong-sorting rate	SF Express / manual sorting	Model assumption	N/A (no public worker level wrong-sorting rate).	Model assumption
SF_MISSCAN	Quality	Manual missed-scan rate	SF Express / manual sorting	Model assumption	N/A (no public worker level missed-scan rate).	Model assumption
SF_DAMAGE	Quality	Damage rate	SF Express / manual sorting	Model assumption	N/A (no public worker level damage rate).	Model assumption
SF_REWORK	Quality	Rework rate	SF Express / manual sorting	Model assumption	N/A (no public worker level rework rate).	Model assumption
SF_PEAK	Peak	Peak-period human productivity loss	SF Express / manual sorting	Model assumption	N/A (no public worker level peak productivity loss).	Model assumption
SF_NIGHT	Night shift	Night shift productivity loss	SF Express / manual sorting	Model assumption	N/A (no public worker level night shift productivity loss).	Model assumption
JD_AUTO_KUNSHAN	Productivity	Unmanned sorting centre throughput	JD Kunshan unmanned sorting centre	System/equipment level	N/A	Public system level data
JD_AUTO_ASIA_DAILY	Productivity/quality	Kunshan Asia No.1 automated sorting centre	JD Kunshan Asia No.1 sorting centre	Site/system level	N/A	Public system level data
JD_SORT_WALL_PPH	Productivity/quality	Automatic sorting wall throughput	JD Logistics automatic sorting wall	Equipment level	N/A	Public equipment level data
JD_PICKER_ASSIST	Productivity	Robot-assisted picking productivity	JD Logistics robot-assisted picking	Human-robot picking	N/A	Public human-robot collaboration data
JD_SMART_WAREHOUSE	Productivity/cost	Zhilang goods-to-person system productivity	JD Logistics smart warehousing	System/equipment level	N/A	Public system level data
JD_WORKER_PPH	Productivity	Parcels processed per hour	JD Logistics / manual sorting	Model assumption	N/A	Model assumption
JD_SHIFT	Shift	Shift length	JD Logistics / recruitment based sorting sample	Recruitment/job posting level	Recruitment evidence: 4h, 6h, 10h, 12h shifts and night/two shift patterns appear in postings.	Public recruitment information - verification required
JD_EFFECTIVE_TIME	Productivity	Effective working time ratio	JD Logistics / manual sorting	Model assumption	N/A (no public worker level effective working time ratio).	Model assumption
JD_WRONG_SORT	Quality	Manual wrong-sorting rate	JD Logistics / manual sorting	Model assumption	N/A (no public worker level wrong-sorting rate).	Model assumption
JD_MISSCAN	Quality	Manual missed-scan rate	JD Logistics / manual sorting	Model assumption	N/A (no public worker level missed-scan rate).	Model assumption
JD_DAMAGE	Quality	Damage rate	JD Logistics / manual sorting	Model assumption	N/A (no public worker level damage rate).	Model assumption
JD_REWORK	Quality	Rework rate	JD Logistics / manual sorting	Model assumption	N/A (no public worker level rework rate).	Model assumption
JD_PEAK	Peak	Peak period human productivity loss	JD Logistics / manual sorting	Model assumption	N/A (no public worker level peak productivity loss).	Model assumption
JD_NIGHT	Night shift	Night shift productivity loss	JD Logistics / manual sorting	Model assumption	N/A (no public worker level night shift productivity loss).	Model assumption

Table B3: Indicator level numerical inputs

Low, base and high values are scenario inputs. Public evidence and assumption status are reported in Table B2.

ID	Low	Base	High	Unit	Source
SF_MANUAL_PPH	300	500	600	parcels/hour/worker	Sohu / maker community repost of Qizhong Intelligence
SF_AUTO_HUB_PPH	71,000	71,000	71,000	parcels/hour/system	Sohu / maker community repost of Qizhong Intelligence

JD_DAMAGE	0.05	0.2	0.5	%	No public worker level data; model assumption
JD_REWORK	0.5	1.5	3	%	No public worker level data; model assumption
JD_PEAK	10	15	25	% decline	JD public peak/automation materials plus model assumption
JD_NIGHT	5	10	15	% decline	User-compiled recruitment table plus model assumption

Table B4: Indicator level modelling basis and recommended use

ID	Modelling basis	Recommended use
SF_MANUAL_PPH	Used as a public benchmark, not as an audited internal KPI.	Use 300/500/600 pph as low/base/high scenarios.
SF_AUTO_HUB_PPH	System level benchmark; not directly comparable with one worker or one humanoid robot.	Use as automation upper bound context; do not compare with a single humanoid robot.
SF_AUTOMATION_INVEST	Used for automation context and seasonal-capacity assumptions.	Use for background and peak capacity assumptions.

Continued on next page

Continued from previous page

ID	Modelling basis	Recommended use
IND_HZ_DAILY	Used as industry level benchmark only.	Use for automation maturity and background (peak scenario).
IND_HZ_ACC	Used as industry level benchmark only.	Use as an optimistic accuracy benchmark for robot scenarios.
SF_SHIFT	Used for shift and night-work assumptions; not used as direct productivity evidence.	Use 10-12 hours for formal workers; model part-time roles separately.
SF_EFFECTIVE_TIME	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 70/80/85% as low/base/high scenarios.
SF_WRONG_SORT	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.1/0.5/1.0% for sensitivity analysis.
SF_MISSCAN	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.1/0.5/1.0% for sensitivity analysis.
SF_DAMAGE	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.05/0.2/0.5% for sensitivity analysis.
SF_REWORK	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.5/1.5/3.0% for sensitivity analysis.
SF_PEAK	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Multiply human productivity by (1 - peak loss) in peak scenarios.
SF_NIGHT	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Multiply human productivity by (1 - night-shift loss) in night scenarios.
JD_AUTO_KUNSHAN	System level benchmark; not directly comparable with one worker or one humanoid robot.	Use for automation-replacement context; not a single-robot value.
JD_AUTO_ASIA_DAILY	System level benchmark; not directly comparable with one worker or one humanoid robot.	Use as JD automation upper-bound and peak-capacity context.
JD_SORT_WALL_PPH	Equipment level benchmark; not a worker level observation.	Use as comparison for small/standard parcel automation.
JD_PICKER_ASSIST	Warehouse picking benchmark; used only as indirect evidence.	Use as warehouse picking evidence.
JD_SMART_WAREHOUSE	System level benchmark; not directly comparable with one worker or one humanoid robot.	Use as human-robot and robotic-system efficiency context.
JD_WORKER_PPH	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 250/400/500 pph as low/base/high scenarios.
JD_SHIFT	Used for shift and night-work assumptions.	Use 10-12 hours for formal workers; model 4-6 hour part-time shifts separately.
JD_EFFECTIVE_TIME	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 70/80/85% as low/base/high scenarios.
JD_WRONG_SORT	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.1/0.5/1.0% for sensitivity analysis.
JD_MISSCAN	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.1/0.5/1.0% for sensitivity analysis.
JD_DAMAGE	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.05/0.2/0.5% for sensitivity analysis.
JD_REWORK	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Use 0.5/1.5/3.0% for sensitivity analysis.
JD_PEAK	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Multiply human productivity by (1 - peak loss) in peak scenarios.
JD_NIGHT	No public worker level evidence; retained as a scenario parameter and marked as N/A in public evidence.	Multiply human productivity by (1 - night-shift loss) in night scenarios.

Table B5: Parcel type manual productivity assumptions

Parcel type	Carrier	Low	Base	High	Unit	Status
Documents	SF Express	450	600	700	parcels/hour/worker	Model assumption - field validation required
Small standard parcels	SF Express	400	550	650	parcels/hour/worker	Model assumption - field validation required
Standard cartons	SF Express	300	450	550	parcels/hour/worker	Model assumption - field validation required

Table B7: Scenario level worker productivity inputs

Carrier	Scenario	pph	Shift hours	Effective time	Effective parcels/shift	Basis
SF Express	Conservative	300	8	70.0%	1,071	Fatigue, peak pressure and exception items.
SF Express	Base	500	10.5	80.0%	3,213	Uses the 500 pph public benchmark and recruitment shift evidence.
SF Express	Optimistic	600	12	85.0%	5,230	Skilled workers, standard parcels and non-peak conditions.
JD Logistics	Conservative	250	8	70.0%	892	No public worker level JD sorting value; low case informed by public robot-assisted picking evidence.
JD Logistics	Base	400	10	80.0%	2,448	Recruitment based shift assumption and lower than SF 500 pph benchmark.
JD Logistics	Optimistic	500	12	85.0%	4,360	Standard small parcels, skilled workers and non-peak conditions.

Table B8: Quality and productivity loss factors by scenario

N/A is used in the public evidence table for missing observed worker level data.

Carrier	Scenario	Night loss	Peak loss	Wrong-sort	Missed-scan	Damage	Rework
SF Express	Conservative	15.0%	25.0%	1.0%	1.0%	0.5%	3.0%
SF Express	Base	10.0%	15.0%	0.5%	0.5%	0.2%	1.5%
SF Express	Optimistic	5.0%	10.0%	0.1%	0.1%	0.1%	0.5%
JD Logistics	Conservative	15.0%	25.0%	1.0%	1.0%	0.5%	3.0%
JD Logistics	Base	10.0%	15.0%	0.5%	0.5%	0.2%	1.5%
JD Logistics	Optimistic	5.0%	10.0%	0.1%	0.1%	0.1%	0.5%

Table B9: Source overview

Source ID	Source	Supported data	Reliability
S1	Sohu / maker community repost: SF automated sorting system	SF South China hub automatic sorting throughput of 71,000 parcels/hour and a 500 parcels/hour manual comparison benchmark.	Medium
S2	SF Holding 2025 interim investor presentation	Transfer efficiency +12.5%; more than 120 new transfer automation units; more than 380 new AGV forklifts; automated capacity above 5.57 million parcels/day.	High
S3	CIMC Deli Hangzhou Chengnan smart logistics park case	Daily capacity of 2.2 million parcels; sorting accuracy 99.99%; peak promotion volume up to three times normal level.	Medium
S4	People's Daily Overseas Edition / People.cn: JD Kunshan unmanned sorting centre	9,000 parcels/hour; 180 workers saved under comparable site and volume conditions; 10-minute charge for 4 hours of work.	High
S5	CIMC Group: JD Kunshan Asia No.1 phase II	More than 80 automated sorting lines; 10,000 intelligent sorting robots; 99.99% accuracy; more than 4.5 million parcels/day during 618; fivefold efficiency improvement.	Medium-high
S6	Shanghai Securities News / Sohu: JD Logistics automatic sorting wall	Automatic sorting wall: 1,800 parcels/hour; scanning/operation accuracy 99.99%; efficiency improvement 50%.	Medium

S9	Author-compiled dataset of publicly available recruitment listings from BOSS Zhipin and Liepin.	Public recruitment extracts; postings change over time and require verification.
E1	No direct public worker level data found	Must be reported as assumptions and replaced with company logs or field observations when available.

Appendix C: Humanoid robot price, BOM and total ownership cost data

This appendix reports the robot-price, bill of materials (BOM), cost and total ownership cost inputs used in the humanoid robot parcel sorting economic model. All monetary values are retained in the currency used in the input workbook unless explicitly stated. Missing or unconfirmed values are reported as N/A.

Table C1: Workbook overview for humanoid robot cost appendix

Item	Value
Workbook purpose	Track 2026 public prices and cost/TCO buckets for humanoid robots relevant to parcel sorting ROI.
Data status	Mix of official public prices, media-reported prices, and enterprise estimates. Quote vendors before final investment decision.
Models covered	18
Lowest public price RMB	9,998
Median public price RMB	180,000
Highest public price RMB	1,800,000

Table C2: Summary of robot models and five year TCO

TCO values include deployment, operating and depreciation assumptions from the workbook.

ID	Company	Model	Price mid RMB	5-year TCO RMB	Comment
1	Noetix Robotics	Bumi / Xiaobumi	9,998	468,316.94	Low-cost/dev class
2	Unitree	R1 Air	35,280	506,998.4	Low-cost/dev class
3	Unitree	R1	42,480	518,014.4	Low-cost/dev class
4	Unitree	R1 domestic entry	33,400	504,122	Low-cost/dev class
5	Booster Robotics	Booster K1	29,900	498,767	Low-cost/dev class
6	AstriBot	T1	89,900	590,567	Low-cost/dev class
7	Unitree	G1	97,200	601,736	Low-cost/dev class
8	Unitree	H2	215,280	782,398.4	Potential pilot class
9	Unitree	H1	648,000	1,444,460	High-cost enterprise class
10	Unitree	H2 Plus	720,000	1,554,620	High-cost enterprise class
11	AgiBot / Zhiyuan	Lingxi X2 Youth	98,000	602,960	Low-cost/dev class
12	AgiBot / Zhiyuan	Yuanzheng A2 Youth	183,000	733,010	Potential pilot class
13	AgiBot / Zhiyuan	Genie G1	450,000	1,141,520	High-cost enterprise class
14	UBTECH	Walker S2	676,800	1,488,524	High-cost enterprise class
15	Fourier Intelligence	GR-1	1,584,000	2,876,540	Very high-cost enterprise/RaaS
16	Agility Robotics	Digit	1,800,000	3,207,020	Very high-cost enterprise/RaaS
17	Tesla	Optimus	180,000	728,420	Potential pilot class

Table C3: Robot price database: model identity and price status

ID	Company	Model	Segment	Region	Price mid RMB	Price status	Quality
1	Noetix Robotics	Bumi / Xiaobumi	Consumer / education	China	9,998	Public sale price	High
2	Unitree	R1 Air	Entry humanoid	China	35,280	Official shop / product page	High
3	Unitree	R1	Entry humanoid	China	42,480	Official shop / product page	High
4	Unitree	R1 domestic entry	Entry humanoid	China	33,400	Media-reported domestic range	Medium
5	Booster Robotics	Booster K1	Education / research	China	29,900	Public launch price	High
6	Astribot	T1	Industrial / general	China	89,900	Media-reported starting price	Medium
7	Unitree	G1	Research / development	China	97,200	Official shop price	High
8	Unitree	H2	Full-size humanoid	China	215,280	Official shop price	High
9	Unitree	H1	Full-size humanoid	China	648,000	Official shop indicative price	High
10	Unitree	H2 Plus	Full-size humanoid	China	720,000	Official shop price	High
11	AgiBot / Zhiyuan	Lingxi X2 Youth	Education / interaction	China	98,000	Public sale price	High
12	AgiBot / Zhiyuan	Yuanzheng A2 Youth	Interaction / service	China	183,000	Public sale / promo range	High
13	AgiBot / Zhiyuan	Genie G1	High-end humanoid	China	450,000	Public sale price	High
14	UBTECH	Walker S2	Industrial humanoid	China	676,800	Enterprise estimate / quote	Low
15	Fourier Intelligence	GR-1	Industrial / research	China	1,584,000	Partner quote	Medium
16	Agility Robotics	Digit	Warehouse logistics	United States	1,800,000	Industry estimate / RaaS	Medium
17	Tesla	Optimus	Benchmark / not for sale	United States	180,000	Target price; not purchasable	Low
18	Tesla	Optimus Gen 2 BOM benchmark	BOM benchmark	United States / China supply chain	637,200	BOM estimate range	Medium

Table C4: Robot price database: original price ranges and capability notes

ID	Model	Original low	Original high	Curr.	RMB low	RMB high	Use case / capability
1	Bumi / Xiaobumi	9,998	9,998	RMB	9,998	9,998	94cm, 12kg, 21+ degree of freedom; education/companion/developer use
2	R1 Air	4,900	4,900	USD	35,280	35,280	Compact humanoid, 20 degree of freedom, tax/shipping excluded
3	R1	5,900	5,900	USD	42,480	42,480	Compact humanoid, 26 degree of freedom, tax/shipping excluded
4	R1 domestic entry	26,900	39,900	RMB	26,900	39,900	Domestic 2026 mass-market price reference
5	Booster K1	29,900	29,900	RMB	29,900	29,900	1m, 19kg, developer/education platform
6	T1	89,900	89,900	RMB	89,900	89,900	Industrial humanoid entering sub-RMB 100k range
7	G1	13,500	13,500	USD	97,200	97,200	Compact 35kg humanoid, 23-43 joint motors, optional dexterous hand
8	H2	29,900	29,900	USD	215,280	215,280	Full-size humanoid listed on Unitree shop
9	H1	90,000	90,000	USD	648,000	648,000	Full-size H1, contact sales for real price
10	H2 Plus	100,000	100,000	USD	720,000	720,000	Higher-end H2 Plus listed on Unitree shop
11	Lingxi X2 Youth	98,000	98,000	RMB	98,000	98,000	1.3m-class interaction/development humanoid
12	Yuanzheng A2 Youth	168,000	198,000	RMB	168,000	198,000	1.7m-class interaction/service humanoid
13	Genie G1	450,000	450,000	RMB	450,000	450,000	High-end embodied intelligence product
14	Walker S2	68,000	120,000	USD	489,600	864,000	Industrial factory/logistics model with hot-swap battery
15	GR-1	220,000	220,000	USD	1,584,000	1,584,000	Full-size research/rehab/industrial pilot humanoid
16	Digit	250,000	250,000	USD	1,800,000	1,800,000	Warehouse bin/tote handling; Amazon pilots; often RaaS
17	Optimus	20,000	30,000	USD	144,000	216,000	Future scaled-production price target only
18	Optimus Gen 2 BOM benchmark	46,000	131,000	USD	331,200	943,200	China supply-chain cost vs ex-China supply-chain cost estimate

Table C5: Robot price database: source URLs and source notes

ID	Company	Model	Source URL	Notes
1	Noetix Robotics	Bumi / Xiaobumi	https://noetixrobotics.com/news/media/213	Not a logistics-grade sorter; price useful as lower-bound consumer benchmark.
2	Unitree	R1 Air	https://www.unitree.com/mobile/R1/	Official page lists R1 Air at \$4,900.
3	Unitree	R1	https://www.unitree.com/mobile/R1/	Official page lists R1 at \$5,900; domestic media also reports lower local entry prices.
4	Unitree	R1 domestic entry	https://www.chinadailyasia.com/article/634870	China Daily Asia reports starting price RMB 26,900; earlier Reuters/media reported RMB 39,900.
5	Booster Robotics	Booster K1	https://www.chinadailyasia.com/article/634870	China Daily Asia reports K1 series starting price RMB 29,900.
6	AstriBot	T1	https://www.chinadailyasia.com/article/634870	Reported starting price; full configuration may be higher.
7	Unitree	G1	https://shop.unitree.com/collections/humanoid-robot	Official shop lists G1 at \$13,500; Chinese media reports G1 base near RMB 85k.
8	Unitree	H2	https://shop.unitree.com/collections/humanoid-robot	Official shop lists H2 at \$29,900.
9	Unitree	H1	https://shop.unitree.com/collections/humanoid-robot	Official shop shows \$90,000 and says contact for real price.
10	Unitree	H2 Plus	https://shop.unitree.com/collections/humanoid-robot	Official shop lists H2 Plus at \$100,000.
11	AgiBot / Zhiyuan	Lingxi X2 Youth	https://news.cnyes.com/news/id/6115374	Reported as AgiBot's cheapest humanoid model at RMB 98,000.
12	AgiBot / Zhiyuan	Yuanzheng A2 Youth	https://news.cnyes.com/news/id/6115374	Cnyes reports RMB 198,000 list and RMB 30,000 limited discount; Sina reports RMB 168,000.
13	AgiBot / Zhiyuan	Genie G1	https://finance.sina.com.cn/tech/roll/2025-08-18/doc-infmmmy1961486.shtml	Sina/Jiemian reports Genie G1 at RMB 450,000.
14	UBTECH	Walker S2	https://blog.robozaps.com/b/ubtech-walker-s-review	UBTECH enterprise quotes vary; public exact price not disclosed.
15	Fourier Intelligence	GR-1	https://www.roboticscenter.ai/store/product/fourier-gr1/	SVRC partner quote lists \$220,000; official Fourier page requires quote.
16	Agility Robotics	Digit	https://blog.robozaps.com/b/agility-robotics-digit-review	Estimated outright price; Agility often sells service/subscription deployment.
17	Tesla	Optimus	https://standardbots.com/blog/tesla-robot	No confirmed retail price; use only as forecast/benchmark, not current purchase quote.
18	Tesla	Optimus Gen 2 BOM benchmark	https://wallstreetcn.com/articles/3774890	WallstreetCN cites Tesla BOM \$46k using China supply chain vs \$131k using US/non-China supply chain.

Table C6: BOM benchmark components and cost values

BOM values combine public/component benchmarks from component estimates of BofA, Roland Berger and WallstreetCN.

Benchmark	Source	Component	Share	Cost low	Cost high	Curr.	RMB low	RMB high
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	Linear actuator integration	0.27	9,450	9,450	USD	68,040	68,040
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	Rotary actuator integration	0.24	8,400	8,400	USD	60,480	60,480
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	Dexterous hand / end effector	0.19	6,650	6,650	USD	47,880	47,880
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	AI chip / AI computing	0.1	3,500	3,500	USD	25,200	25,200
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	Vision system	0.04	1,400	1,400	USD	10,080	10,080
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	Battery	0.02	700	700	USD	5,040	5,040
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	Heat management system	0.02	700	700	USD	5,040	5,040
BofA typical humanoid BOM (China-made components, by 2025)	BofA Global Research	Other body / structural / connectors	0.12	4,200	4,200	USD	30,240	30,240
Roland Berger 2026 component model for entry level robots	Roland Berger	Motion: actuator	N/A	1,265	1,265	USD	9,108	9,108
Roland Berger 2026 component model for entry level robots	Roland Berger	Hand/end effector system	N/A	333	333	USD	2,397.6	2,397.6
Roland Berger 2026 component model for entry level robots	Roland Berger	Motion: other	N/A	342	342	USD	2,462.4	2,462.4
Roland Berger 2026 component model for entry level robots	Roland Berger	Energy & charging	N/A	380	380	USD	2,736	2,736
Roland Berger 2026 component model for entry level robots	Roland Berger	Skeleton & structural components	N/A	820	820	USD	5,904	5,904

Table C10: Robot TCO model: depreciation, residual value and five year TCO

5-year TCO is the cumulative ownership cost benchmark used to compare humanoids in the low cost, pilot, and enterprise categories.

ID	Model	Residual value	Annual depreciation	Annual operating cost	5-year TCO	TCO / purchase	Status / comment
1	Bumi / Xiaobumi	1,999.6	3,259.55	90,403.84	468,316.94	46.84	Low-cost/dev class
2	R1 Air	7,056	8,973.28	92,426.4	506,998.4	14.37	Low-cost/dev class
3	R1	8,496	10,600.48	93,002.4	518,014.4	12.19	Low-cost/dev class
4	R1 domestic entry	6,680	8,548.4	92,276	504,122	15.09	Low-cost/dev class
5	Booster K1	5,980	7,757.4	91,996	498,767	16.68	Low-cost/dev class
6	T1	17,980	21,317.4	96,796	590,567	6.57	Low-cost/dev class
7	G1	19,440	22,967.2	97,380	601,736	6.19	Low-cost/dev class
8	H2	43,056	49,653.28	106,826.4	782,398.4	3.63	Potential pilot class
9	H1	129,600	147,448	141,444	1,444,460	2.23	High-cost enterprise class
10	H2 Plus	144,000	163,720	147,204	1,554,620	2.16	High-cost enterprise class
11	Lingxi X2 Youth	19,600	23,148	97,444	602,960	6.15	Low-cost/dev class
12	Yuanzheng A2 Youth	36,600	42,358	104,244	733,010	4.01	Potential pilot class
13	Genie G1	90,000	102,700	125,604	1,141,520	2.54	High-cost enterprise class
14	Walker S2	135,360	153,956.8	143,748	1,488,524	2.20	High-cost enterprise class
15	GR-1	316,800	358,984	216,324	2,876,540	1.82	Very high-cost enterprise/RaaS
16	Digit	360,000	407,800	233,604	3,207,020	1.78	Very high-cost enterprise/RaaS
17	Optimus	36,000	41,680	104,004	728,420	4.05	Potential pilot class

Table C11: Robot cost-category map: definitions and default estimation

Cost bucket	What it includes	Default estimation	Use in ROI	Caveat
Bare machine / robot body	Public robot purchase price or manufacturer quote; excludes tax/shipping/custom integration	Use mid public price from robot price	Main capex; compare against annual labour saving	Public prices often refer to developer models, not industrial configurations.
End effector	Dexterous hands, gripper, suction cup, parcel handling tooling, tactile sensors	End effector upgrade rate x hardware price	Essential for parcels; default hands may not be enough for soft packs and irregular parcels	Often optional and not included in base robot price.
Vision system	Depth camera, LiDAR, RGB cameras, industrial camera, lighting, OCR vision	Included in base if manufacturer includes; otherwise allocate from BOM benchmarks	Required for parcel localisation and bin-picking	Can be much higher if adding industrial cameras and lighting.
Barcode/scanning system	Fixed scanner, handheld/robot-mounted 1D/2D scanner, OCR/DWS integration	Scanner system base RMB	Critical for express sorting; humanoid vision alone does not replace barcode workflows	Usually not part of humanoid price.
Mobility system	Leg actuators, joint modules, reducers, motors, screws, encoders, bearings, servo drives	Part of base robot; compare to BOM actuator shares	Determines whether robot can move between fixed workcell	Largest cost bucket, also main maintenance stations or only stand at risk.
Safety system	E-stop, collision avoidance, protective covers, fences, warning lights, risk assessment, insurance enablement	Safety system rate base x hardware price	Required if operating near workers; affects deployment permission	Often hidden in integration budget.
Software cost	Fleet software, robot SDK, navigation updates, cloud, monitoring, VLA/LLM subscriptions	Software license base RMB per robot/year	Can determine whether robot is Opex-heavy even if hardware is cheap	Vendors may bundle first-year software.
Integration cost	WMS/WCS/TMS integration, workflow redesign, simulation, training, acceptance testing	Integration rate base x hardware price	Often decides whether pilot can scale	Real quote needed.
Maintenance cost	Preventive maintenance, spare parts, battery replacement, joint/gear wear, service contract	Maintenance rate base x hardware price/year	Night sorting may push maintenance upward	Warehouse robotics benchmark; humanoid data still limited.

Continued on next page

Continued from previous page

Cost bucket	What it includes	Default estimation	Use in ROI	Caveat
Operations personnel	Robot technician, trainer, remote operator, fleet supervisor	Ops engineer annual cost RMB / Robots per ops engineer	If one person manages few robots, ROI worsens sharply	Supervision need is often underestimated.
Electricity	Charging energy and battery swap station power	Power kW x hours/day x days/year x tariff	Small compared with labour, but useful for complete TCO	Power varies by task intensity and payload.
Downtime loss	Lost throughput, backup labour, missed cut-off, service delay and recovery costs	Downtime hours per year x downtime cost per hour RMB	Important for express logistics because cut-off times matter	Hard to estimate without site data.
Depreciation	Annual accounting cost of robot, integration and accessories net of residual value	Straight-line depreciation over useful life years	Turns capex into annual cost to compare with annual labour cost	Rapid price declines can shorten economic life.
Residual value	Expected resale/scrap value at end of useful life	Residual rate x hardware price	Higher residual improves payback; low residual raises risk	Very uncertain in 2026 due to rapid price declines.

Table C12: Robot cost category map: data collection and low/base/high logic

Cost bucket	Recommended data to collect	Low/base/high logic
Bare machine / robot body	Model, configuration, hand option, battery option, warranty, tax, shipping	If no quote, use low/high public price range
End effector	Hand model, payload, grip success rate, parcel types, replacement frequency	5% / 10% / 20% of hardware price
Vision system	Sensor bill, camera resolution, lighting, perception software	BofA vision 4%; Roland perception entry \$166/advanced \$465
Barcode/scanning system	Scanner unit price, mounting, SDK/WMS integration, scan success rate	RMB 500 / RMB 5,000 / RMB 20,000
Mobility system	degree of freedom, actuator count, motor/reducer supplier, payload, walking speed, uptime	BofA linear+rotary actuator = 51%; Wall-streetCN says joint modules ~half
Safety system	CE/GB compliance, safety certification, risk assessment cost, near-miss events	1% / 3% / 8% of hardware price
Software cost	Annual license, API usage, cloud compute, model updates, cybersecurity	RMB 7,200 / RMB 28,800 / RMB 72,000 per year
Integration cost	Engineering days, WMS API, safety testing, line downtime during installation	10% / 20% / 50% of hardware price
Maintenance cost	Service contract, warranty, replacement schedule, critical spares, MTBF	5% / 8% / 12% of hardware price/year
Operations personnel	Technician salary, robots per technician, teleoperation need	Depends on supervision ratio
Electricity	kWh per hour, operating hours, electricity tariff	Editable power and hours
Downtime loss	Downtime hours, parcel throughput/hour, penalty/backup labour cost/hour	Editable low/base/high
Depreciation	Useful life, residual value, capex basis	3 / 5 / 7 years
Residual value	Second-hand market, supplier buyback, spare-part value	5% / 20% / 35%

Table C13: Robot cost assumptions and low/base/high values

Parameter	Base	Low	High	Unit
USD to RMB	7.2	7	7.4	RMB per USD
EUR to RMB	7.8	7.5	8.1	RMB per EUR
Maintenance rate base	0.08	0.05	0.12	% of hardware price/year
Software license base RMB	28,800	7,200	72,000	RMB/year
Integration rate base	0.2	0.1	0.5	% of hardware price
Safety system rate base	0.03	0.01	0.08	% of hardware price
Scanner system base RMB	5,000	500	20,000	RMB upfront
End effector upgrade rate	0.1	0.05	0.2	% of hardware price
Ops engineer annual cost (RMB)	180,000	120,000	300,000	RMB/year
Robots per ops engineer	8	4	15	Robots/person
Electricity tariff RMB per kWh	0.8	0.6	1.2	RMB/kWh
Power kW base	0.6	0.3	1.2	kW
Operating hours per day	16	8	22	hours/day
Operating days per year	300	250	350	days/year
Downtime hours per year	120	40	300	hours/year
Downtime cost per hour (RMB)	300	100	1,000	RMB/hour
Useful life years	5	3	7	years
Residual rate	0.2	0.05	0.35	% of initial hardware price
BOM proxy rate of sale price	0.6	0.4	0.8	%

Appendix D: Baseline human labour cost inputs

This appendix reports the baseline human labour cost inputs used in the economic analysis. The table combines the wage estimates reported in Appendix A with the sorting productivity and quality parameters reported in Appendix B. These inputs determine the annual employer labour cost, annual processed volume and human sorting cost per parcel for SF Express and JD Logistics.

Table D1: Baseline human labour cost inputs

Input	SF Express	JD Logistics
Average monthly wage (USD)	948.33	1,000.49
Annual employer labour cost (USD/FTE/year)	14,794.00	15,628.79
Human sorting throughput (parcels/hour)	500	400
Quality adjusted annual throughput (parcels/FTE/year)	975,834	743,493
Human sorting cost (USD/parcel)	0.01516	0.02102

Appendix E: Detailed results

This appendix reports the numerical results that support the economic analysis in the main text. It presents the Unitree G1 cost thresholds, required robot throughput, cost efficiency frontiers, simulation results and hybrid staffing solutions for SF Express and JD Logistics. Results are reported for low, normal and peak demand conditions. The appendix includes the parameter values and model equations used to calculate the reported results.

Table E1: Main threshold results

Main threshold result for Unitree G1 at \$13,500	SF Express	JD Logistics
Normal season: required pph for unit cost break-even	336.1	242.4
Normal season: required pph for 3-year payback	394.4	284.5
At q=300 pph: max G1 price for 3-year payback	4,112	15,644
At q=400 pph: max G1 price for 3-year payback	14,056	29,432
Conclusion	For SF, G1 must reach ~395 pph or cost $\leq$ \$4.1k at 300 pph for a 3-year payback. At 400 pph, \$13.5k becomes acceptable. For JD, G1 is viable at 300 pph because the 3-year payback price ceiling is \$15.6k.	

Table E2: Seasonal G1 required throughput

Carrier	Season	Demand/day	Human UC (\$/parcel)	q_BE unit	q_BE 3yr	Interpretation
SF Express	Cold/off-peak	50,000	0.0131	363.3	426.2	Harder in cold/off-peak; easier in peak because labour becomes more expensive relative to robotic capacity.
SF Express	Normal	100,000	0.0152	336.1	394.4	Harder in cold/off-peak; easier in peak because labour becomes more expensive relative to robotic capacity.
SF Express	Hot/peak	200,000	0.0214	292.4	343.1	Harder in cold/off-peak; easier in peak because labour becomes more expensive relative to robotic capacity.
JD Logistics	Cold/off-peak	50,000	0.0181	262	307.4	Harder in cold/off-peak; easier in peak because labour becomes more expensive relative to robotic capacity.
JD Logistics	Normal	100,000	0.0210	242.4	284.5	Harder in cold/off-peak; easier in peak because labour becomes more expensive relative to robotic capacity.
JD Logistics	Hot/peak	200,000	0.0297	210.9	247.4	Harder in cold/off-peak; easier in peak because labour becomes more expensive relative to robotic capacity.

Table E3: General model parameters

All monetary values are in USD.

Parameter	Value	Unit	Role in model	Source / rationale
Exchange rate (CNY per USD)	6.78	CNY/USD	Converts salary and cost data	Editable assumption from earlier USD workbook
Workdays per year	312	days	Annual capacity conversion	26 days/month $\times$ 12
Robot useful life	5	years	Depreciation	Base deployment assumption
Residual rate	0.20	Share of bare price	Depreciation	Base residual assumption
Target payback	3	years	Investment break-even	Commercial investment threshold
End-effector upgrade rate	0.10	Share of bare price	Upfront robot deployment	Gripper, suction, or dexterous-hand adaptation
Safety system rate	0.0300	Share of bare price	Upfront robot deployment	Emergency stop, protection, and safety deployment

Continued on next page

Continued from previous page

Parameter	Value	Unit	Role in model	Source / rationale
Integration rate	0.20	Share of bare price	Upfront robot deployment	WMS/WCS integration and site engineering
Barcode/OCR system	737.4	USD upfront	Upfront robot deployment	Scanner/OCR proxy
Maintenance rate	0.0800	Share of bare price/year	Annual robot OPEX	Warehouse robotics maintenance proxy
Annual software	4,247	USD/year	Annual robot OPEX	Robot software and cloud proxy
Annual operations personnel allocation	3,318	USD/year	Annual robot OPEX	Robotics technician allocation
Annual electricity	339.8	USD/year	Annual robot OPEX	Charging and electricity proxy
Annual downtime loss	5,309	USD/year	Annual robot OPEX	Downtime-loss proxy
Robot cost coefficient a	0.31	USD/year per USD price	$C_R(P) = aP + b$	Derived from depreciation and maintenance
Robot fixed annual cost b	13,362	USD/year	$C_R(P) = aP + b$	Derived from scanner depreciation and fixed OPEX

Table E4: Human labour and productivity inputs

Parameter	SF Express	JD Logistics	Unit	Source / rationale
Annual employer cost	14,794	15,629	USD/FTE/year	Derived from uploaded salary component table
Base human unit cost	0.0152	0.0210	USD/parcel	Employer cost divided by quality-adjusted annual parcels
Base annual good parcels	975,834	743,493	Parcels/FTE/year	Derived from efficiency workbook
Base monthly salary midpoint	948.3	1,000	USD/month	Derived from recruitment salary data

Table E5: Seasonal demand and capacity assumptions

Season	Demand/day	Human capacity multiplier	Robot capacity multiplier	Labour cost multiplier	Robotable parcel share
Cold/off-peak	50,000	1.10	1.00	0.95	0.75
Normal	100,000	1.00	1.00	1.00	0.70
Hot/peak	200,000	0.85	0.95	1.20	0.60

Table E6: Interactive calculator

Input	Value	Unit	Description
Robot bare price	13,500	USD	Edit this value
Robot throughput q	300	parcels/hour	Edit this value
Carrier	SF Express		Use SF Express or JD Logistics
Season	Normal		Use Cold/off-peak, Normal, or Hot/peak
Output	Formula result	Unit	Decision interpretation
Human unit cost in selected season	0.0152	USD/parcel	
Robot annual cost	17,493	USD/year	$C_R(P) = 0.306P + 13,362.44$
Robot annual output	1,029,820	parcels/year	q multiplied by seasonal robot multiplier
Robot unit cost	0.0170	USD/parcel	Lower than human UC means unit cost efficient
Unit cost efficient	No		
Required q for unit cost break-even	336.1	parcels/hour	Current q must be at least this value
Required q for 3-year payback	394.4	parcels/hour	More conservative investment criterion
Maximum price for unit cost break-even at current q	7,353	USD	
Maximum price for 3-year payback at current q	4,112	USD	
Lookup table used by calculator			
Season	SF Express Human UC	JD Logistics Human UC	Robot annual multiplier
Cold/off-peak	0.0131	0.0182	3,678
Normal	0.0152	0.0210	3,433
Hot/peak	0.0214	0.0297	2,795

Table E7: G1 thresholds

This table answers: at Unitree G1 price = \$13,500, what throughput is needed?

Carrier	Season	Demand/day	Seasonal human UC	q for unit cost break-even	q for 3-year pay-back	Main managerial reading	Criterion
SF Express	Cold/off-peak	50,000	0.0131	363.3	426.2	Use the 3-year payback threshold for investment decisions; unit cost threshold is a lower bar.	Dynamic threshold
SF Express	Normal	100,000	0.0152	336.1	394.4	Use the 3-year payback threshold for investment decisions; unit cost threshold is a lower bar.	Dynamic threshold
SF Express	Hot/peak	200,000	0.0214	292.4	343.1	Use the 3-year payback threshold for investment decisions; unit cost threshold is a lower bar.	Dynamic threshold
JD Logistics	Cold/off-peak	50,000	0.0182	262.0	307.4	Use the 3-year payback threshold for investment decisions; unit cost threshold is a lower bar.	Dynamic threshold
JD Logistics	Normal	100,000	0.0210	242.4	284.5	Use the 3-year payback threshold for investment decisions; unit cost threshold is a lower bar.	Dynamic threshold
JD Logistics	Hot/peak	200,000	0.0297	210.9	247.4	Use the 3-year payback threshold for investment decisions; unit cost threshold is a lower bar.	Dynamic threshold

Table E8: Price efficiency frontier(a)

For each throughput q, the table reports the maximum bare robot price that can break even.

Carrier	Season	Throughput q (pph)	Pmax unit cost (\$)	Pmax 3-year pay-back (\$)	G1 price (\$)	G1 feasible by unit cost?	G1 feasible by 3-year payback?
SF Express	Cold/off-peak	200	-12,194	-7,318	13,500	No	No
SF Express	Cold/off-peak	250	-4,326	-2,717	13,500	No	No
SF Express	Cold/off-peak	300	3,543	1,884	13,500	No	No
SF Express	Cold/off-peak	350	11,411	6,485	13,500	No	No
SF Express	Cold/off-peak	400	19,280	11,085	13,500	Yes	No
SF Express	Cold/off-peak	450	27,148	15,686	13,500	Yes	Yes
SF Express	Cold/off-peak	500	35,017	20,287	13,500	Yes	Yes
SF Express	Cold/off-peak	600	50,754	29,489	13,500	Yes	Yes
SF Express	Cold/off-peak	700	66,491	38,690	13,500	Yes	Yes
SF Express	Cold/off-peak	800	82,228	47,892	13,500	Yes	Yes
SF Express	Normal	200	-9,654	-5,833	13,500	No	No
SF Express	Normal	250	-1,151	-860.6	13,500	No	No
SF Express	Normal	300	7,353	4,112	13,500	No	No
SF Express	Normal	350	15,856	9,084	13,500	Yes	No
SF Express	Normal	400	24,360	14,056	13,500	Yes	Yes
SF Express	Normal	450	32,863	19,028	13,500	Yes	Yes
SF Express	Normal	500	41,367	24,000	13,500	Yes	Yes
SF Express	Normal	600	58,374	33,944	13,500	Yes	Yes
SF Express	Normal	700	75,381	43,888	13,500	Yes	Yes
SF Express	Normal	800	92,388	53,833	13,500	Yes	Yes
SF Express	Hot/peak	200	-4,566	-2,858	13,500	No	No
SF Express	Hot/peak	250	5,209	2,858	13,500	No	No
SF Express	Hot/peak	300	14,985	8,574	13,500	Yes	No
SF Express	Hot/peak	350	24,760	14,290	13,500	Yes	Yes
SF Express	Hot/peak	400	34,536	20,006	13,500	Yes	Yes
SF Express	Hot/peak	450	44,311	25,721	13,500	Yes	Yes
SF Express	Hot/peak	500	54,087	31,437	13,500	Yes	Yes
SF Express	Hot/peak	600	73,637	42,869	13,500	Yes	Yes
SF Express	Hot/peak	700	93,188	54,301	13,500	Yes	Yes
SF Express	Hot/peak	800	112,739	65,732	13,500	Yes	Yes
JD Logistics	Cold/off-peak	200	-27.4	-203.9	13,500	No	No
JD Logistics	Cold/off-peak	250	10,883	6,175	13,500	No	No
JD Logistics	Cold/off-peak	300	21,793	12,555	13,500	Yes	No
JD Logistics	Cold/off-peak	350	32,703	18,934	13,500	Yes	Yes
JD Logistics	Cold/off-peak	400	43,613	25,313	13,500	Yes	Yes
JD Logistics	Cold/off-peak	450	54,523	31,693	13,500	Yes	Yes
JD Logistics	Cold/off-peak	500	65,434	38,072	13,500	Yes	Yes
JD Logistics	Cold/off-peak	600	87,254	50,831	13,500	Yes	Yes
JD Logistics	Cold/off-peak	700	109,074	63,589	13,500	Yes	Yes

Table E15: Model formulas

Component	Formula	Meaning	Decision use
Robot annual economic cost	$C_R(P) = aP + b$	$a = 0.306$ and $b = 13,362.44$ under the baseline TCO assumptions.	Maps bare robot price to annual economic cost.
Robot annual output	$Q_R(q, s) = q h_R d u_R \theta_R (1 - r_R) \phi_s m_s$	Throughput multiplied by operating hours, workdays, uptime, handling quality, robotable parcel share and seasonal capacity.	Maps robot efficiency to annual good parcels.
Seasonal human unit cost	$UC_{H,j s} = UC_{H,j} \frac{\lambda_s}{\eta_s}$	Labour cost multiplier divided by the human capacity multiplier.	Makes peak and off-peak labour costs comparable.
Unit cost break-even	$\frac{C_R(P)}{Q_R(q, s)} \leq UC_{H,j s}$	Robot unit cost must not exceed human unit cost.	Operational cost parity.
Required robot throughput	$q_{j s}^{UC}(P) = \frac{C_R(P)}{UC_{H,j s} h_R d u_R \theta_R (1 - r_R) \phi_s m_s}$	Minimum parcels per hour required for a robot with bare price P .	Answers how efficient the robot must be.
Maximum robot price	$P_{j s}^{UC}(q) = \frac{UC_{H,j s} Q_R(q, s) - b}{a}$	Maximum bare robot price allowed at throughput q under unit cost parity.	Answers how cheap the robot must be.
Three-year payback frontier	$P_{j s}^{PB}(q) = \frac{T UC_{H,j s} Q_R(q, s) - T O_F - B}{(1 + \alpha_E + \alpha_S + \alpha_G) + T \alpha_M}$	Bare robot price ceiling under the cash payback target T .	Main investment threshold.
Integer optimisation objective	$\min_{R, H} \left[R \frac{C_R(P)}{d} + H \frac{C_{H,j} \lambda_s}{d} \right]$	Chooses the number of robots R and human workers H that minimise daily operating cost.	Determines the best hybrid robot-human mix.
Capacity constraint	$\min\{RK_R(q, s), \phi_s D_s\} + HK_{H,j s} \geq D_s$	Robots can only cover the robotable share of demand; humans cover residual demand and exceptions.	Prevents unrealistic full automation.

Table E16: Sources

Input block	Source	How used	Data quality	Limitation
Salary components	Public recruitment listings from BOSS Zhipin and Liepin	Employer cost, salary components, night shift, formal-worker status, housing/meal/social-insurance indicators	Medium	Recruitment pages are dynamic; figures are public postings rather than internal payroll
Human efficiency	Uploaded efficiency and quality workbook	Human pph assumptions and quality-loss ranges; SF 500 pph benchmark; JD estimates where worker data are not public	Medium	Wrong sorting, missed scanning, damage, and rework rates for individual workers are mostly estimated.
Robot prices and TCO	Uploaded humanoid robot 2026 price/BOM/TCO workbook	Robot prices, scanner, software, maintenance, downtime, operator allocation and other TCO items	Medium	Industrial contract prices and maintenance contracts are incomplete
Unitree G1 benchmark	Public robot price in previous robot workbook	Main reference robot with P=\$13,500	High for public price; medium for logistics deployment	Public price does not guarantee industrial parcel-sorting readiness
Seasonal simulation assumptions	Model assumption sheet	Cold/off-peak, normal and hot/peak demand with labour and capacity multipliers	Scenario assumption	Parcel volume must be replaced by real facility data when available
